

## TOMMY'S FIRST EYE EXAM!

Color Tommy and his eyes so his eye doctor can check them.

Tommy was having a hard time reading. He had to squint to see the words in his school books. Then his mother took him to see a VSP eye doctor. The doctor said Tommy was farsighted. That means it's hard to see things up close. Tommy got a new pair of glasses. Now he's able to read better and he's doing much better in school!

Color in the pictures of Tommy before and after his eye exam.

Did you know that your eye doctor can look inside your eyes to check what's going on inside your body? They may seem simple, but your eyes are very complex!

Color in the parts of the eye to complete the diagram.
